Lambeth, London

SUMMARY

Senior C#/.NET DEVELOPER with 13 years' experience in software development. Experience working with public and private sector clients in the construction, utilities, retail, and the oil and gas industry as well as the charity and voluntary sector. An advocate of TDD with a constant drive for self-development, learning new languages and technologies. Experienced with a wide range of front and backend technology. Specialized primarily in C# / .Net / JavaScript.

KEY STRENGHTS

- Comfortable on both the front and backend proven by delivering web applications using modern JavaScript frameworks (Angular) built on top of the latest server side tech (C#/ASP .NET CORE).
- Writes high-quality, well-tested, maintainable code that adheres to software design principles and best practices. Strong knowledge of fundamentals - data structures, algorithmic programming.
- Proficient in refactoring and debugging. Good knowledge of reverse engineering tools and techniques.
- Writes quality documentation, articles, use cases, user stories, and technical specs

TRAINING

| PROFESSIONAL SCRUM MASTER scrum.org 2018

EDUCATION

| BSc Software Engineering (2:1) Sheffield University 2002 - 2005

PROJECTS

| Mopidy-Radio-Pi Raspberry Pi audio server GitHub: https://bit.ly/30viyPp

RECENT EXPERIENCE

LEAD C#/.NET DEVELOPER BP Upstream | 2017 - 2020

Worked in a fast paced Agile environment building high profile applications using the latest development, testing and deployment techniques while following Scrum / DevOps practices. Most recently implementing a high scalable high available global application hosted on cloud infrastructure in MS Azure using a Microservice oriented architecture along with a C#, .NET Core, SQL Server/Entity Framework, and JavaScript tech stack. The resulting application removed inconsistency in volumetric estimates yielding significant cost and time saving for the business.

Key achievements:

- Built scalable .NET Core apps and APIs that enabled better decision making by automating manual business processes
- Improved scalability of apps by decomposing applications into separate Microservices running in Docker containers.
- Led the development and adoption of Angular to build modern user interfaces that adhered to UX best practices, helping increase user productivity.
- Developed re-usable components which increased velocity on subsequent projects
- Introduced Definition Of Done. Despite initial internal reluctance to adopt it greatly Improved overall agile team performance.
- Reduced deployment times by setting up CI/CD pipelines.
- Increased security of apps by leveraging OAuth 2 / Azure AD / JWT tokens
- Cut down app running costs by leveraging serverless technologies (Azure Functions)

SENIOR C#/.NET DEVELOPER

SIG PLC | 2012 - 2017

Worked in cross-functional Agile team building various Windows and Web applications. Notable achievements include leading the migration of a suite of business-critical eCommerce websites from a legacy platform to cloud infrastructure in MS Azure. This resulted in increased conversion rates as well as a more robust eCommerce platform that leveraged message bus technologies for increased reliability and availability.

Kev achievements:

- Successfully led a multi skilled team in delivering a high quality eCommerce platform on time and under budget.
- Switched production deployment environment from local server architecture to cloud platform reducing IT maintenance cost.
- Improved reliability and durability of critical business transactions by leveraging message-based technology including WCF and Azure Service Bus.
- Conducted software development principles and unit testing trainings for the team team improving overall quality and design awareness.
